

Karan Singh Thakur

PHP Developer | Web Application Developer

Erie, PA | tkskaransinghthakur@gmail.com | LinkedIn | GitHub

Professional Summary

PHP Developer and Web Application Developer with 3+ years of experience building, maintaining, testing, and supporting database-driven web applications, workflow platforms, and production systems. Strong background in PHP, Laravel, MySQL/MariaDB, JavaScript, HTML5, CSS3, REST APIs, Git, Agile/Scrum delivery, QA, technical documentation, and stakeholder-facing requirements gathering. Experienced in structuring software across UI, API, and database layers; producing proofs of concept; supporting applications in O&M status; resolving production defects; and delivering maintainable solutions for business and end-user workflows. Additional background in enterprise application environments and Java-adjacent support.

Core Skills

Backend & Frameworks	PHP, Laravel, MVC, OOP, Composer, Eloquent ORM, Blade, REST APIs, authentication, validation, middleware, scheduled jobs, queue-based workflows
Databases	MySQL, MariaDB, SQL, relational schema design, query optimization, indexing, reporting queries, data validation, SQL Server familiarity
Frontend	HTML5, CSS3, JavaScript, jQuery, responsive UI, accessibility, form validation, cross-browser testing
Architecture	UI/API/DB structuring, CRUD applications, business workflow design, application maintenance, enhancement delivery
SDLC & Quality	Agile/Scrum, requirements analysis, sprint planning, prototyping, integration testing, regression testing, defect triage, bug fixing, O&M support
Tools & Platforms	Git, GitHub, Linux, Apache, LAMP, Docker, WP Engine, Postman, Git-based release management
Documentation & Support	Technical documentation, user guides, release notes, QA checklists, stakeholder communication, plain-English requirement translation

Professional Experience

Free To Choose Network

Web Developer, PHP / WordPress Applications

Erie, PA

May 2025 – Present

- Develop, enhance, and maintain PHP, JavaScript, HTML5, CSS3, and MySQL/MariaDB functionality across production web applications, user workflows, and business-facing platform features supporting digital education and content operations.
- Build and support database-driven application features across UI, backend logic, and data layers, including custom templates, admin workflows, reusable components, structured content modules, and learner-facing interfaces.
- Gather requirements from leadership, marketing, communications, and content stakeholders; translate requests into technical tasks, proofs of concept, acceptance criteria, and production-ready application enhancements.
- Support applications in O&M status by troubleshooting defects, fixing PHP compatibility issues, debugging JavaScript behavior, validating data flows, and coordinating safe deployment and rollback procedures.
- Integrate third-party platforms and APIs for forms, email automation, analytics, and tracking workflows; validate payloads, field mappings, user registration logic, and event instrumentation.
- Optimize MySQL/MariaDB queries, post metadata, plugin-generated records, and content retrieval patterns to improve application stability, admin performance, and user experience.
- Conduct integration testing, regression testing, browser testing, mobile QA, accessibility checks, and release smoke testing before production deployment.
- Create and maintain technical documentation, release notes, support checklists, and plain-English explanations for non-technical stakeholders and content owners.
- Maintain secure, reliable application environments across development, staging, and production using Git-based workflows, backup validation, issue remediation, and deployment verification.

Temenos AG

Web Application Developer / Junior Programmer Analyst

Hyderabad, India

Jun 2021 – Jan 2023

- Developed enterprise onboarding applications using JavaScript, Groovy, HTML5, CSS3, REST APIs, and database-driven workflow logic in a regulated fintech environment.
- Built and maintained responsive, form-driven user interfaces with backend validation, workflow routing, session handling, and secure service integrations for digital banking application flows.

- Structured features across UI, API, and data layers, improving maintainability and delivery speed for customer onboarding journeys and business-rule-heavy workflows.
- Collaborated with product owners, business analysts, QA teams, and engineering leads to gather requirements, refine sprint deliverables, prototype solutions, and deliver tested enhancements.
- Participated in Agile/Scrum ceremonies, revision control workflows, defect triage, QA validation, release support, and post-deployment issue remediation.
- Troubleshoot production and UAT issues involving API failures, validation defects, workflow logic errors, browser inconsistencies, and performance bottlenecks.
- Produced technical notes, implementation guidance, and support documentation to improve developer handoff and operational continuity.

HCL Technologies
Software Developer / Application Support Analyst

Hyderabad, India
Jan 2023 – Sep 2023

- Supported enterprise web, reporting, and backend workflows using SQL, Python, Java, API integration patterns, and relational databases in production-focused environments.
- Built and optimized SQL queries, validation routines, and reporting logic to improve data accuracy, reduce manual effort, and support business users with reliable operational outputs.
- Assisted with application maintenance, bug fixing, release validation, API troubleshooting, and production support across enterprise technology systems.
- Worked in Agile delivery teams using Git for version control, change tracking, issue resolution, documentation, and coordinated release support.
- Contributed to stakeholder-driven enhancements, support handoffs, and operational troubleshooting across internal systems requiring reliability and clear communication.

Selected Projects

Internal Sales Operations Workflow Portal

Laravel, PHP, MySQL, Blade, Bootstrap, PHPUnit, Docker, Git

- Designed and built a Laravel-based internal business application prototype for quote intake, order approvals, ticket triage, and finance-ready status tracking across multi-role workflows aligned to Sales, Operations, and Finance use cases.
- Implemented RBAC, Eloquent models, migrations, validation rules, queued notifications, audit logs, 20+ REST endpoints, and 35+ PHPUnit feature tests; optimized indexed reporting queries from approximately 1.8s to 220ms in staging.

Billing Reconciliation and API Sync Dashboard
Import/Export

Laravel, PHP, MySQL, SQL Server, Scheduler, Queues, CSV

- Built a reconciliation prototype to ingest billing exports, normalize records, flag mismatches, and generate searchable exception dashboards with downloadable audit reports.
- Processed 50k-row sample datasets, implemented scheduled jobs and retry logic for sync failures, and documented schema mappings, support runbooks, and deployment steps for maintainable operations.

Civics Fundamentals Platform Modernization

PHP, JavaScript, MySQL/MariaDB, WordPress, LearnDash, GA4

- Modernized a production educational platform supporting 128 civics questions and 137+ course steps, improving course progression logic, dashboard behavior, quiz protection, and structured content delivery.
- Resolved production issues across PHP compatibility, caching, analytics instrumentation, plugin conflicts, and database-driven content workflows while supporting iterative enhancement releases.

Education

Master of Science in Computer Science
University of Central Missouri

GPA: 3.9/4.0

Certifications

AWS Certified Solutions Architect – Associate | Certified Kubernetes Administrator | AWS Certified Data Analytics – Specialty | Databricks Certified Associate Developer for Apache Spark
